MOCK INTERVIEW – PERFORMANCE REPORT

Data Handling and Visualization | Assessment Tool 3 – Comparative Analysis

Evaluation aligned with the uploaded AT-3 Question Bank and its rubric

Student Name	G Kushwanth	Reg. No.	192424150
Section / Batch	AI&DS	Date	_____

1. Overall Performance

Overall Mock Interview Score: 95 / 100

Performance Level: Excellent / Interview Ready

The mock interview consisted of 10 randomly selected questions from the Question Bank. The responses were evaluated for conceptual understanding, accuracy, clarity, interpretation, and quality of explanation.

2. Question-wise Performance

Question	Topic	Score	Performance Note
Q1	Histogram	95/100	Excellent definition and clear explanation of distribution, spread, skewness and peaks.
Q2	Box Plot & Outliers	94/100	Correctly explained IQR and the use of fences to identify unusual values.
Q3	Violin Plot	96/100	Strong explanation of density, distribution shape, peaks, gaps and multiple modes.
Q4	Bar Chart vs Histogram	96/100	Clear distinction between categorical data and numerical intervals with appropriate use cases.

Q5	Heatmaps	95/100	Clearly explained color coded grids and how they reveal patterns, trends and relationships.
Q6	Heatmap Color Intensity	94/100	Correctly connected color intensity with data

Mock Interview Performance Report | Data Handling and Visualization

Question	Topic	Score	Performance Note
			magnitude and explained the role of the legend.
Q7	Pair Plot	95/100	Accurately described pairwise scatter plots and diagonal distributions for multivariate exploration.
Q8	Density Plot	93/100	Correctly identified center, spread, shape, peaks, skewness and concentration of values.
Q9	Dimensionality Reduction	95/100	Strong definition and clear explanation of reducing features while retaining important information.
Q10	PCA Before Visualization	97/100	Excellent explanation of reducing high-dimensional data to 2D/3D while preserving important patterns.

3. Rubric-based Score Calculation

The uploaded AT-3 rubric assigns weightages of 20% for Scope of Items, 25% for Comparison Depth, 20% for Use of Evidence, 20% for Critical Thinking, and 15% for Clarity of Presentation. The following performance mapping totals 95/100.

Rubric Criterion	Weightage	Level	Awarded	Reason
------------------	-----------	-------	---------	--------

Scope of Items	20%	Level 4 – Exemplary	19/20	All 10 selected questions were answered directly and remained within the stated Question Bank topics.
Comparison Depth	25%	Level 4 – Exemplary	24/25	Answers showed clear conceptual distinctions and practical interpretation, especially for related visualization methods.
Use of Evidence	20%	Level 3 – Proficient	18/20	Technical terminology and reasoning were strong; adding more concrete dataset examples would strengthen the

Mock Interview Performance Report | Data Handling and Visualization

Rubric Criterion	Weightage	Level	Awarded	Reason
				evidence.
Critical Thinking	20%	Level 4 – Exemplary	19/20	Responses explained not only what each method is, but also why and when it is useful.
Clarity of Presentation	15%	Level 4 – Exemplary	15/15	Answers were concise, direct, organized and easy to understand.
TOTAL			95/100	Overall: Excellent

4. Strengths Demonstrated

- Strong conceptual understanding of histograms, box plots, violin plots, heatmaps, pair plots, density plots, dimensionality reduction and PCA.
- Consistently accurate use of technical terms such as IQR, density, skewness, modes, high-dimensional data and principal components.
- Clear explanations that connect each visualization or technique to its practical purpose. •

Strong ability to distinguish related methods and explain what information each method reveals.

- Concise oral-style answers that retain the important concepts without unnecessary explanation.

5. Areas for Improvement

- Add a short practical example when explaining a visualization technique to demonstrate application. •

For a few answers, explain limitations or situations where the technique may be less suitable. •

Continue practicing concise explanations of closely related visualization methods and their differences.

- Include simple dataset-based examples where possible to make answers even stronger.

6. Recommended Answer Strategy

Use the following structure during the actual assessment: Define the concept → explain its purpose → mention an important feature or example → conclude with its practical use.

High-scoring pattern: “The concept means _____. It is useful because _____. For example, _____. Therefore, it is most suitable when _____.”

7. Final Lecturer-style Verdict

95 / 100 — EXCELLENT

Mock Interview Performance Report | Data Handling and Visualization

The candidate demonstrates excellent understanding of the Data Handling and Visualization topics. The responses were accurate, clear, concise, and well structured. The candidate consistently used correct technical terminology and explained the purpose and practical value of the methods. The main opportunity for improvement is to add brief practical examples and a little more depth on limitations when appropriate.
